

# Software library for the Vampire

With the Vampire, you have access to the huge software library (apps, games, demos, etc.) available for classic Amigas. If you encounter any problems when running your desired software, please refer to [compatibility considerations](#).

Many apps benefit from the huge speed boost and high resolutions offered by the Vampire, compared to previous state-of-the-art solutions. Some example categories:

App type	Example software	
3D rendering	LightWave 3D, Cinema 4D, Real 3D, Aladdin4D, Imagine, POV-Ray	
Image processing	ImageFX, ArtEffect, Photogenics	
Video processing	Adorage, Wildfire, MainActor, FFmpeg	
Audio processing	HD-Rec, LAME	
Video playback	RiVA	
Available games	Fastest alternative 68k accelerator <sup>1)</sup>	Vampire
<a href="#">Descent: FreeSpace - The Great War</a>	unplayable	<b>playable</b>
194X Deluxe	unplayable	<b>playable</b>

If a piece of software was never released for the Amiga, you can often run it using [an emulator or a game engine](#), as long as your Vampire is powerful enough for that software.

You are here: [start](#) » [software\\_library](#)

<sup>1)</sup> Assumed to be a 68060 processor clocked at 75 MHz, which is the fastest 68k-compatible CPU (with the exception of the 68080 on the Vampire).
